

# Technical data sheet printing

## Programs:

InDesign CS2, Illustrator CS4, CS6, Photoshop CS4, CS6

## Data Transfer:

1. CD-ROM / DVD
2. e-mail: [info@boldt-messeservice.de](mailto:info@boldt-messeservice.de)
3. Server: <http://boldtmesse.dyndns.org:7000/>  
Login: boldtgast  
Passwort: 1boldt23

## Important informations:

Please create the document in a format fitting size, true-to-scale of final format as a pdf-file.

Your files do not have to be created in original size. You may e.g. create the data on a scale of 1:10. Important is only that you create the files in proportion to the final size. The image resolution should be at least 150 dpi (in original image size).

Please always create the data in CMYK mode.

Motives, texts, etc. important for the image should always be placed far enough from the image border (cutting tolerance of approx. 2mm. Images placed in the bleed require approx. 3 mm trim allowance.

All fonts are to be converted in paths or be embedded.

For all motives we require, if possible, colour prints, at least, however, a black and white-printout with dimensions. Please indicate for all important colours, e.g. the corporate colour in the logo, a HKS-detail in the printout to be attached.

We would like to point out that in digital printing colour precision cannot be guaranteed a hundred percent. Depending upon used material, identical colour values may be reproduced differently.

Quoted prices, delivery times and printing quality can only be guaranteed, if the data are created according to this data sheet. In case of deviations, complaints shall not be permitted afterwards.

Yours sincerely

The Boldt-messeservice team
